The Archive AGE

True Archiving for Clarity and Niku! The Archive AGE will allow you to safely move or remove historical Projects and Time Sheet data from your Clarity / Niku repository which will:

- Reduce the size of the Clarity / Niku Repository and increase performance.
- Remove unwanted information from your Clarity / Niku views and reports.
- Move data between Clarity / Niku environments.
- Allow you to run any Clarity / Niku product on the archived data.
- Restore archived data to production if necessary.

With a very simple user-interface, the Archive AGE is a powerful tool that will move data between your production Niku repository and an Archive repository that you set up, or between any two Clarity / Niku environments. This archived data is preserved and can be viewed with any Clarity / Niku tool, or restored back into production.
